PURE WATER, PURE AIR,
HEALTH AND PLEASURE.

IN ANNOUNCING TO
THE PUBLIC THE
OPENING OF THE

Chattolane Springs Hotel,

KNOWN AS THE FAMOUS GREEN SPRINGS,

Chattolane Springs.

THE MANAGEMENT ASK A CAREFUL AND
DISCRIMINATE PERUSAL OF THIS PAM-
PHLET, ESPECIALLY OF THAT PORTION
OF IT RELATING TO THE

Chattolane
Springs,

THE WATER OF WHICH HAS BEEN SHOWN, BY CHEMICAL
ANALYSIS AND MICROSCOPIC EXAMINATION, TO BE THE
PUREST KNOWN. AS A BEVERAGE OR A REMEDY ITS EQUAL
IS UNKNOWN, AND THE ONLY OTHER WATER COMPARABLE
TO IT IS THE FAMOUS POLAND SPRING OF MAINE,
HITHERTO REGARDED AS THE PUREST ON THE CONTINENT.

CHATTOLANEE WATER CURES
LIVER AND KIDNEY DISEASES.

Chattolanee Springs Hotel.

THE exacting demands of these times, in the direction of business and pleasure, tell so surely and severely on people, that change of scene and rest are frequently the chief prescriptions, which able physicians who are hygienists as well, order for many of their patients. Another class comprises a large number who travel for pleasure purely, and who come and go searching for that ideal place of comfort where pure air, pure water, fine climate, fresh scenery and elegant surroundings will help to fill their days with pleasure, and their nights with refreshing slumber.

Chattolanee Springs Hotel

ful Hotel will meet all the demands that can be made by both. It is beautifully located on the top of a hill 130 feet above the Springs, is 300 feet long, and

NEARLY ALL GREAT EPIDEMICS HAVE THEIR ORIGIN IN IMPURE WATER.

stands 625 feet above tide water. It possesses every requisite to render life enjoyable, having been built under the personal supervision of the proprietor, whose reputation as a builder of houses and hotels, which are homes in their comfort, style and elegance, is not of local limitation. This Hotel is as strongly built throughout as **Construction.** stone, brick and hardwood can make it, and situated on a hill the cellar is as dry as dust; being also thoroughly cemented. Heavy stone foundations and immense stone columns carrying ponderous girders, are the support of the superstructure; in this basement which is thoroughly lighted from large windows, are located the Children's Play Room and Gymnasium, Billiard Room, Bowling Alley, Barber Shop, Public Baths, etc.

First Floor. Approaching the hotel, either by foot path or carriage-way, the guest passes by a broad and easy stairway to a wide and extensive porch, sweeping round the house and measuring more than six hundred feet in length,—nearly one-eighth of a mile. Crossing the porch, from the stairway, one enters through a wide and handsome hallway into the Social Hall, a special and interesting feature of this hotel. Two immense chimneys, with open fire-places, beautifully tiled and decorated, easy chairs, plants and flowers, pictures and bric-a-brac, all tend to give Social Hall an air of delightful homelikeness. The decorations of walls and ceilings in these halls is unusually artistic, and entirely new and novel, never before introduced in Baltimore. Through an archway on each side and to the rear of the fire-place, a section of Social Hall is broken into two cozy alcoves or parlors—but still a part of the Hall—where parties or families can assemble for conversation or greater seclusion. Near by is the

Telephone Room, Strictly private, and as nearly noise-proof as possible. Communication can thus easily be had by business men with their city offices or homes if need be, and long distance communication with Washington and other points. A large and magnificently fitted parlor is at the west end of the hotel, connected with which is a smaller parlor for the convenience of withdrawal from the larger room or of those wishing partial privacy. On this floor are the ladies' general and private bath rooms, retiring rooms and lavatory.

NATURE'S GREATEST REMEDY IS PURE WATER.

THE LADIES' RECEPTION ROOM is a gem, and the Gentlemen's Smoking Room, with its special ventilation to remove smoke a work of rare thoughtfulness and convenience.

Dining Room. Facing towards the East and South is the Dining Room with an immense Chimney and Open Fire-Place. A rich stained glass window sends the light in rays of beauty into the room, and the handsome fittings and finish of this apartment make it a magnificent Dining Hall. Its exposure to the East and South makes it a pleasant room at all seasons of the year; and its arrangements are such that in a moment's time it can be transformed into a Concert Hall for private theatricals, readings, and other amusements. From the East window a charming and extensive view of Green Spring Valley can be obtained; and from a porch window or Alcove the strains of delightful music are heard during the dining hour. The artistic decoration of this room, with its novel wainscot will be a feature of constant beauty.

The Kitchen, Which is one story high and partially separated from the main building is perfect in design and practical in all its appointments. By a superior system of ventilation, all the odors and reminders of cookery are discharged into ventilating shafts, and nothing offensive to sight or smell can annoy the most fastidious guest. The pastry ovens, bread ovens and main range all occupy separate rooms and convenient to the cooks and help are the storage rooms, the refrigerating and receiving rooms, pantries, etc. The Refrigerators especially built for this Hotel, are models of perfection, and different from any other kind in or near Baltimore. They are patented and built by the Haffcke Sanitary Refrigerator Company. The distinguishing difference between the Haffcke process of refrigeration, and all other methods gives the Haffcke plan the incomparable superiority over all known means of preserving food products. There is no contact with ice, which more or less injures meats, poultry, fish, eggs, oysters, butter, milk, etc.; but instead there is a cold, saline atmosphere, the antiseptic power

STUDY FOR THE MIND, AIR FOR THE LUNGS AND PURE WATER FOR THE BODY.

of which preserves all articles of food without rendering them liable to sudden decomposition when brought, into a normal summer atmosphere. This system of refrigeration is indorsed by the medical profession, (see "Transactions of the Medical and Chirurgical Faculty of Maryland for 1888, paper by John Morris, M. D.) and praised and used by some of the best hotel keepers.

Upper Floors. Three wide and easy stairways, one in the centre, and one on each end of the Hotel, afford safe and rapid access to the different floors. The provision against danger by fire is so perfect that it seems next to impossible for any such thing to happen. Stand pipes with hose fed from an immense tank, patent fire extinguishers, water buckets, and fire alarm gongs on each floor, sounded from the office, are among the safe-guards.

Heating. The Public Rooms and Halls on the first and second floors will be heated by steam, supplied by boilers away from the Main Building in a Boiler House built of iron, brick and stone, and absolutely fire-proof. Indeed, except occasional fire in open fire places provided for this especial purpose, the whole house as already stated is heated by steam. The reason for heating at all is : This location is so delightfully cool, that it was thought best to introduce steam heat to render the building entirely comfortable in the early mornings and evenings of May, June and September, and for the special convenience of the guests of the Hotel.

Rooms and their Appointments. There are about two hundred rooms in the house, single and *en suite*, with commodious closets, perfect ventilation, plenty of heat, abundance of direct light, and so arranged that sunlight, so essential to health, can be admitted into every room, if desired. The walls are plastered with ADAMANT, a new substance which honors its name in the impenetrably hard surface it presents. It is impervious to dampness, proof against incipient fire, vermin and insects, and a safe-guard for health, as no fear need be felt concerning dampness or injurious effects while sleeping or resting in rooms plastered with it. This substance is really a great hygienic necessity and an absolute requirement in all modern buildings. "It

PURE WATER AND PURE AIR, THE GREATEST ESSENTIALS TO GOOD HEALTH.

does not chip, crack or pit, is not easily marred, and is a very hard and dense material; it adheres equally well to brick, lath or iron, and will last as long as the building. Leakages in pipes will not cause it to cleave off. Rats cannot gnaw through it. It can be painted, papered, frescoed, or given any desired decoration or finish, says *Builder and Decorator*." The rooms all open on wide, straight halls, where the circulation of the air assures ventilation.

Ventilation and Drainage.

only constructed under the strict sanitary laws of the City of Baltimore, but includes far greater facilities and advantages than required by law, having special means of ventilation suggested by the proprietor, and the work all done by Mr. John Trainor, President of the National Association of Plumbers of the U. S. Immense ventilating shafts, project beyond the top of the Hotel, and are designed to carry off, with their strong and constant current, everything like impure air or unpleasant odors, if such should exist. The ventilation, sewerage, drainage and plumbing of this Hotel are as near perfection as the latest scientific ideas and skilled workmen can make anything.

Large and Airy.

The rooms are large and airy, some with bath rooms, some with porches and others with bay windows. Many of the suites have bath attached, and all the comforts, conveniences and advantages which have been added to this Hotel, tend to make it a homelike place of sojourn rather than a stopping place for a day or two. All the floors of the main rooms on the first story are heavily felted beneath, to deaden the sound of walking on them.

The Closets

Of this Hotel are a special feature; nearly every room contains one, and they are roomy, many of them large enough for one to walk about in them, with novel arrangements for distributing clothing, hooks innumerable for ladies dresses and skirts, and special devices for suspending gentlemen's coats. These closets are the ladies delight and immense conveniences.

Carpets and Furnishings.

The rooms are all furnished in home like style; the carpets are pretty designs and the furniture is mostly in Antique Oak. Electric bells, speaking tubes, steam heat, a June atmosphere in winter, and a May temperature in the Summer contribute, with all that has been noted, to make

Chattolane Springs the Health and Pleasure Seeker's Ideal Home.

What Next?

Having read of the comforts, conveniences and homelike arrangements of the Hotel itself, naturally the next and most reasonable question would be

WHAT ARE THE ATTRACTIONS AND INDUCEMENTS?

It will be the aim of the management to offer such varied and numerous attractions during the season, as to render a sojourn at Chattolane Springs one of continued enjoyment, and of most pleasant memory.

The Table.

Our markets are the finest in the world; and whether it be flesh, fish or fruits, the product of land or water, the markets of our State are matchless, as *bon vivants* the world over will tell.

THE BEST OF EVERYTHING, COOKED IN THE BEST OF STYLE, IS THE RULE OF OUR HOUSE.

Amusements and Diversions.

Most liberal provision has been made for the entertainment and diversion of the guests and residents of the Chattolane Springs Hotel. Recognizing the fact that amusement constitutes a source of recreation the tendency of which is towards health, the management have arranged a programme of pleasure which includes

MUSIC, RIDING AND DRIVING, CROQUET, TENNIS, ARCHERY, QUILTS, BILLIARDS, BOWLING, ETC.,

CHATTOLANEE WATER IS WONDERFULLY BENEFICIAL AS A DAILY BEVERAGE.

and a suitably equipped Children's Gymnasium for all the ordinary health-giving exercises and motions required, where outdoor exercise is prevented by weather or other sufficient cause.

An especially prominent attraction at Chattolanee Springs is the music. This will be of the highest character, and such as to please the lovers of music, even those of the most critical and fastidious taste. With this object in view the management have secured a splendidly trained and experienced Orchestra whose methods and services will be expressed in delicacy of expression, and perfect instrumentation rather than in the *furioso* efforts of a full brass band. In fact the happy medium between hyper-classical music on the one hand, and meaningless music on the other will be the selection. The best from the old masters, the brightest from the new and the most pleasing from all will be interpreted in the noblest style by these artists.

After a day's anxiety and care in business, what a calm to the senses, and a joy to the ear is the sweet music of a balanced orchestra. And to begin a day's services or pleasures with the melody of happy harmony is the assurance of a day wherein work will set the easier, and joy be the brighter for the memory of the morning's prelude of soft music.

The Orchestra includes the following artists; Mr. Richard Kuehn, Signor Andrea Coda, Mr. Theo. Schaumberg, of Philadelphia, Pianist, Mr. A. Shirra, Cornetist, of Philadelphia and Prof. Rudolph Green, all well known as artistic performers.

Herr Richard Kuehn has been one of the leading violinists of the Boston Symphony Orchestra since it was organized. Signor Andrea Coda, has a wide reputation as Clarionet Virtuoso; for years he has played in the best concerts in Baltimore and won many admirers. Mr. A. Shirra will be the Cornet player.

CHATTOLANEE WATER PURIFIES THE BLOOD AND CLEANSSES THE SYSTEM.

Mr. Schaumberg is one of the best Pianists of the day, and Mr. A. Shirra is recognized as one of the finest Cornetists of Philadelphia, playing first cornet of Wanamaker's Band and for years Cornetist at Chestnut Street Theatre.

The Orchestra will be conducted by Prof. Rudolph Green, who has established a high musical reputation as cellist and leader. Prof. Green has been a member of Theodore Thomas' Orchestra, first cellist of the German Opera at the Metropolitan Opera House, New York, under Seidel, and has been heard for many years as soloist, in Trios, Quartetts and Orchestras in most of the concerts in Baltimore.

These musicians are engaged exclusively for Chattolane Springs from June to October, and will perform in concert every day at suitable hours. Through their efforts to impart a lofty tone to all the musical entertainments, the programmes of our Summer Concerts will not contain a number against which objection can be reasonably urged as being trivial or uninteresting. From time to time additional musical attractions will be added.

Riding and Driving. Connected with the Hotel is a perfectly fitted out Livery Stable, under the management of an experienced and careful horseman and responsible manager. The best Riding and Driving Stock will be always available; and guests having their own horses can rely on stock receiving the very best possible care and attention.

Billiard Hall and Bowling Alley. An elegant Billiard Hall with latest improved Billiard Tables, and splendidly fitted up Bowling Alleys, will be at the service of the guests.

The Big Spring, Flowing *over a half million gallons* of the purest water daily, is a wonder itself. Where does so much water come from, and whither does it go? It bubbles through the rock and sand in streams of crystal purity. You drink it and want more, and the more you drink the better you feel for the drinking. Over the stone steps leading to this wonderful water-flow, is a large rustic pavilion, with roomy seats and overhanging boughs of trees. It is an ideal trysting place;

NATURE'S CHEMISTRY GIVES THAT PUREST PRODUCT, CHATTOLANEE WATER.

or the spot of sweet confidences; or a dozing place where a morning nap will carry you off to the land of fantasy and dreams; or a reading room where the morning papers, or the newest books can be read to the music of the waters, or the sighing of the south wind through the tremulous harp strings of the trees.

Tower Sights. The right centre of the Hotel is surmounted with a tower and observatory from which magnificent views can be had of the beautiful Green Spring Valley, surpassing in effect and impression, the scenery of most Summer Resorts. Vistas through the forest, secured by cutting out the trees, open up spots of beauty and expanses of loveliness the memory of which will live with you long after you have taken your departure.

A Play Room For the children, kept within doors for any reason, will remind parents that the comfort, health and pleasure of the little people have not been overlooked.

THE RAMBLE, CHATTOLANEE SPRINGS PARK.

Out-of-Door-Life. Guests do not wish to live in the Hotel all the time.

Fresh air, pure water and proper exercise are each and all as important as food and sleep. The park and grove of the Hotel is a beautiful rambling ground; and, with easy seats everywhere, and through the grove a score or more of charming rustic pavilions, straw-thatched and cosily fitted up, out-door life at Chattolane Springs can be made a source of much pleasure and true health-building. Nearly a hundred acres of lawn and woods surround the Hotel, and the Oak, Chestnut and Beech trees cast their grateful shade over the grounds.

The numerous Springs are situated in a magnificent grove of immense trees, forming a charming and delightfully cool place, even in the hottest day of mid-summer.

PURE WATER IS ESSENTIAL TO MAKE GOOD TEA AND COFFEE.

Medical Attendance, can be had at all times, and an able physician will be located in the house to attend to any who may need his services.

Everything considered, the attractions of Chattolanee Springs as a delightful Summer Resort, are many and unusual, and one would have to visit this beautiful spot to enjoy and appreciate it.

HOW TO REACH CHATTOLANEE SPRINGS, THE NEAREST SPRINGS TO PHILADELPHIA, WASHINGTON AND BALTIMORE.

FROM PHILADELPHIA, ONLY 2 HOURS AND 50 MINUTES RIDE.

Passengers from Philadelphia and the North, take the Philadelphia, Wilmington and Baltimore R. R., and change cars at Union Station, Baltimore, for Chattolanee Springs.

FROM WASHINGTON, ONLY 1 HOUR AND 30 MINUTES RIDE.

Passengers from Washington, D. C. and the South take the Baltimore and Potomac R. R., and change cars at Union Station, Baltimore, for Chattolanee Springs.

FROM BALTIMORE. ONLY 35 MINUTES RIDE.

Take the train either at Calvert Station, or Union (Charles St.) Station, via Northern Central R. R. The Train Service will be ample, and such as to accommodate all business men.

Tickets. Commutation Tickets monthly and quarterly at greatly reduced rates from regular fares, with all information in regard to trains, time-tables, Excursion tickets, etc., furnished on application, personally or by mail, to any of the Pennsylvania R. R. Offices.

PURE WATER FROM EARLIEST CHILDHOOD WOULD GIVE A ROUNDED CENTURY OF LIFE.

The Drive To the Springs from Baltimore is a most beautiful one of about an hour and a quarter, passing through Druid Hill Park and Pimlico Road into the Green Spring Valley, only 7 miles from the North entrance of the Park ; by this line persons save the toll, which they would otherwise pay if they drove by the Turnpike.

The Railroad Ride. The Railroad ride to Chattolancee Springs is a genuine pleasure and not a task. The route is along the Northern Central Railroad to Lake Roland, through a rocky picturesque and ever charming country; thence along the shore of Lake Roland until the beautiful Green Spring Valley opens on your sight with its lovely landscapes, primeval forests, magnificent residences, rich and rolling farm lands, and every other requisite to make your ride a diversion and fresh daily enjoyment. Every trip on this road is a revelation.

Opening. The Hotel will be open for the reception of guests about the 25th of May, 1899, and will be *open for the season*, extending to October 1st or even later if circumstances induce it. As the demand for rooms commenced before the New Year, and, prior to the issue of this book, March 25th, about one-half of the rooms have been engaged, it would be expedient for those contemplating a visit to the Springs to secure their accommodations at once.

Prices and Conditions.

TERMS FOR TRANSIENT GUESTS FROM \$3.00 TO \$4.00 PER DAY.

Special terms for a week, month or season. Until May 25th, 1899, for all further information, call on, or address,

W. L. STORK, Owner,
Room 5, Bank of Baltimore Building,
Baltimore Md.

WM. B. SOUTHWORTH, Manager.

After May 25th, address at Chattolancee Springs, Baltimore Co., Md.

| Table Refined and Homelike. | Good Livery Stable. |
| | Convenient to Baltimore. |
| A Water matchless for purity and health-giving properties. | One spring alone flowing over half a million gallons of pure water daily. |

Chattolanee Springs.

FORMERLY GREEN SPRINGS

A Fragment of History.

About forty years ago, in 1850, the Green Springs Hotel, situated in the Green Spring Valley, was opened under the management of Mr. Richard Share. The place had previously been a water-cure establishment, and achieved quite a reputation—so great, indeed, that scores of old Baltimoreans yet recall the large patronage which the place enjoyed, because of the great curative power of the famous Green Springs, now the Chattolanee Springs.

Fire. The hotel, which was afterwards burned down, stood alongside the railroad track. Communication from the Springs to the city was by horse railroad to the Relay House, and from there to the city by steam car, over the Northern Central Railway. Two trips were made each way daily—morning and evening.

Horse Cars. The ride from the Springs to the Relay House was as already stated, by horse car, which ran nearly all the way through the woods, the ladies and children, stopping at the Hotel, going back and forth on the trips, which furnished a great deal of enjoyment, as the route was both smooth and shady and the scenery very picturesque. The walks about the place were charming, and at that time, trout fishing was very good indeed. Since then the Valley has filled up, grown greatly in population and increased immensely in wealth.

CHATTOLANEE WATER IS NATURE'S PUREST PRODUCT.

First Guests. Among the guests at the opening of the hotel by Mr. Share, were Mr. Henry James, Mr. H. M. Bash and family, Mr. Jacob P. Hartman and family, Mr. William Shirley and others, whose names now elude us. The house was well patronized from the first, and continued to enjoy prosperity until destroyed by fire. The old hotel accommodated about fifty or sixty guests, was built about 1830, and burned about 1858. Among others who visited the Springs fully 60 years ago, were Mr. Daniel Chase, Mr. Wm. M. Mentzel, then a child, and his mother and father, Mr. and Mrs. Henry Mentzel; the three last named still living.

The War. The owners did not rebuild this hotel, and the place ceased to be a resort, although the water of the Springs was still used to a great extent. The great issues of the controversy between the States were now fast coming to a decision, and soon the war, with all its vast absorbing interests and details, was upon the Nation, and this enterprise, like thousands of others, was forgotten in the conflict and never again substantially taken up until the summer of 1889. At this time Mr. W. L. Stork bought the Springs and the great grove of beautiful trees through which they are scattered, and begun to improve his purchase. The new hotel, built under his personal supervision, is an immense building, about three hundred feet long, and magnificently fitted with every convenience, comfort and luxury to make life a literal pleasure and health a magnificent possession.

BREATHE DEEP. SLEEP DEEP. DRINK DEEP OF CHATTOLANEE WATER.

The Name. Not a little tradition is interwoven with the history of the Springs. The name, Chattolanee Springs, means, in the Indian tongue, Rock Water, and a more appropriate name would be difficult to find. Here from the rocks and sand flow those wonderful fountains which carry crystal purity in their every drop, and health at every sip. These Springs are numerous, and pour forth immense quantities of purest water, one alone discharging over five hundred thousand gallons a day; and their protection, surroundings and adornment, as well as the means employed by the management of the Hotel to keep these waters forever pure and undefiled, are emphatic endorsements of the enterprise and foresight of the new owner.

WHERE THE INDIANS FOUND "Elixir Vitæ." Years ago, when this land was one vast wilderness, untrodden, save by the foot of the wild animal and the Indian, the spot was a veritable "happy hunting-ground," a meeting place or natural council chamber of the "Susquesahanocks," the "Tockwoghs," the "Kuskurawocks," the "Wighcocomocoes," and, possibly, the "Powhatans," of whom was Pocahontas. This is shown from the fact that here were found—an evidence of primitive civilization—numerous arrowheads and stone implements of the age of five hundred years ago, plowed from the neighboring fields. And the trees—so grand and majestic, with their broad, spreading branches reaching high heavenward—appear as if they might be the same as those which sheltered the red man as he sat about the council fire, speaking of peace or war. And it was here, one may imagine, without much stretch of thought, that as they drank of the cool "Green Spring," the sick recovered health, and the old, youth—at this "Elixir of Life" spot of the aborigine.

Some Interesting Facts about Water Generally, and Chattolanee Water Particularly.

THE German Scientist who said that man was a bucket or two of water, and a teaspoonful of phosphorus, spoke considerably more than a half truth. Water makes up about seven-tenths of our physical bodies, about eight-tenths of all our food, and constitutes the most important factor in the

HALF A MILLION GALLONS OF PURE WATER FROM ONE SPRING DAILY.

continuance of our lives. Trees, grass and flowers, fruits, grains and vegetables, all thrive by air, light and water; but water is their greatest nourishment, and the nourishment of the animal kingdom too, if we could but realize it. Water is the most abundant of all nature's gifts, because it is the most needed.

Health's Demands. Good health absolutely depends upon pure air and pure water. The famous French physician, who, when dying, called his surrounding confreres of the profession to him and told them he would give them the secret of his professional success, imparted the wisdom of a lifetime in the words: Pure air, pure water, pure food and sound sleep are the best physicians.

Pure Water a Rarity. A perfectly pure water is an uncommon substance. Because of the impurities even in so-called good water, many medicines are ordered by physicians to be prepared with *distilled* water, and the pharmacopœias of all nations rightly direct its use. The medical profession say that they would hesitate to name the limit of the remedial efficacy of a perfectly pure water. It is the greatest of all solvents. It helps to maintain the volume of the blood. It is nature's great tonic, serving to strengthen the weak, and often to restore life which would have failed but for its wonderful power.

ONE MILLION DOLLARS.

So highly is pure water valued, when well known as such, that the sum of *one million dollars* is said to have been recently offered for the famous Poland Springs of Maine; and the water of Chattolane Springs assays almost exactly the same as this wonderful water of the famous Maine Springs, except that it is even purer. Life is precious; worth much more than a million dollars; and yet how few people seem to appreciate the importance of drinking pure water. Of course, the purer the air one breathes and the better the water one drinks, the higher the degree of health; and the purity of the air and water of Chattolane Springs is matchless anywhere in this country.

CHATTOLANEE WATER IS ABSOLUTELY FREE FROM ALL ORGANIC MATTER.

The Function and Service of Pure Water. Water is not only a tonic, but it is a purifying agent as well, and by cleansing the system through the medium of the great organs, it accomplishes its hygienic purpose and removes from the body large quantities of effete matter, which would otherwise clog and congest these organs, and thereby interfere with the processes of nature. Chattolane Water is preventive as well as remedial, and is of rare service in Kidney Troubles, Dyspepsia, Indigestion, Rheumatism, Liver Troubles, and the various complications arising from these ailments, by flushing the great purifying organs of the system and carrying out the poisonous principles and substances inimical to health.

The Chemistry of Chattolane Springs Water. The following critical analysis and supplemental observations were furnished by Professors Lehmann and Mager, Chemists of renown, who enjoy the full confidence of the great chemical school of the Johns Hopkins University of Baltimore, Maryland.

LEHMANN & MAGER,
ANALYTICAL AND METALLURGICAL LABORATORY,
111 South Gay Street, Baltimore, Md.

G. W. Lehmann, Ph. D.
Chemist and Metallurgist Baltimore
Copper Works, and Chemist for U. S. Government.

W. Mager,
Formerly Chemist at the N. C. Fertilizer,
Control Station.

BALTIMORE, JANUARY 16TH, 1890.

Result of Analysis of sample of Spring Water from Chattolane Springs, Green Spring Park, sample taken by ourselves
October 10th, 1889.

Analytical and Metallurgical Laboratory.

Compare the two Analyses. Carefully read these two analyses and then decide in the light of the ablest scientific evidence how closely alike the waters of the two great Springs (Chattolanee and Poland,) are.

ANALYSIS OF POLAND SPRING WATER.

LABORATORY OF THE SCHOOL OF MINES, COLUMBIA COLLEGE,
49th Street and 4th Avenue, NEW YORK, August 7, 1875.

HIRAM RICKER & SONS:

Gentlemen;—The sample of Poland Mineral Spring Water submitted to me for examination, contains in one United States gallon [231 cubic inches];

PHYSICIANS NOW TELL PEOPLE TO DRINK ALL THE PURE WATER THEY WANT.

Sulphate of Potassa.....	0.1562 grains.
Chloride of Sodium.....	0.2636 grains.
Carbonate of Soda.....	0.1333 grains.
Carbonate of Lime.....	1.2287 grains.
Carbonate of Magnesia.....	0.5412 grains.
Oxide of Iron and Alumina.....	traces
Silica.....	1.1197 grains.
Organic and Volatile Matter.....	0.2332 grains.

Total.....3.6759 grains.

The Water is colorless, tasteless, and alkaline,

Respectfully, your obedient servant,

C. F. CHANDLER, Ph., D.,

Professor of Analytical and Applied Chemistry.

In comparing these two analyses, please observe that where the Poland Spring Water has in each gallon 0.2332 grains of organic matter, which is always, in every water, the index of its comparative impurity, the Chattolancee Water is absolutely free from organic matter. So that while the Poland Water is unquestionably a remarkably pure water, the Chattolancee Water ranks as even a purer water.

Note especially in the following professional opinion respecting the Chattolancee Springs Water the emphasis with which its wonderful purity, its "staying" quality and its admirable service as a daily beverage and a remedial agent are presented.

FURTHER STRONG POINTS.

Messrs. Lehmann & Mager, in their remarks supplementary to the Analysis, say:

No absolute line of demarcation can be drawn between ordinary and mineral waters. There is usually in the latter an excess of mineral constituents or of temperature, but some drinking waters are called mineral waters, and many very pure waters have been regarded for ages as mineral springs.

PURER WATER THAN CHATTOLANEE WATER CAN NOT BE FOUND.

The effects of mineral waters on the bodily system are different from those of drinking waters. Mineral Waters are, so to speak, reserved for the suffering portion of humanity, for specific diseases, and it has been imagined that there is something special in the nature of these waters. But we must pass by these speculations and be guided by ascertained facts respecting the action on the system of the Chattolance Spring Water, and of the mineral constituents present.

Not one of the ingredients of the Spring Water, as compared with the above analysis, is objectionable in the least, whilst on the other hand there is strictly an absence of all objectionable substances. In fact this is very remarkable, the more so, as there are but very few springs which are entirely free from organic matter, either in solution or suspension.

Organic matter in drinking water is the source, the very nursing ground, for all kinds of diseases. Our hydrant water, in which the health-giving mineral ingredients are more or less wanting—except perhaps such as have been washed by surface drainage of the rain water into the lakes which supply our city—contains organic matter and animalcules of every description, has often a foul smell; in short, we all know the condition of affairs in this respect, and need not dwell any longer on this subject.

Let us return to the Spring. The "staying quality" of the water is such that the contents of one bottle corked tightly, and another left in contact with the atmosphere—in our possession since the 10th of October, of last year, has been found—January 16, 1890—not only without the slightest odor, but as fresh and pure to the taste as on the day it was procured from the Spring.

The effect of impure drinking water on the system is a very serious matter, and often does not receive due consideration until too late. Every glass of water we drink, *if impure*, leaves its poison in our system, little by little building up the foundation for all kinds of ailments and diseases. Pure water, on the contrary, absorbs the poisons already in the system, carries them off and leads to a sort of general washing out of the organs.

Looking at the analysis, kind nature, like a true physician, has filled the prescription completely, adding the Magnesia salts—gently acting on the bowels—the Lime, etc., etc.

POLAND SPRINGS.

The analysis of the CHATTOLANEE SPRING WATER as compared with the analysis of other famous Springs, the POLAND SPRING in Maine, for instance, shows the Chattolance Water to be superior and purer. But let us remember that, in addition to the therapeutic action of mineral waters, there are certain very important subsidiary considerations which must not be overlooked. An individual who goes from home to drink them finds himself in a different climate, with possibly a considerable change of altitude. His diet is necessarily altered, and his usual home drinks are given up. There is a change in his habits. He is relieved from the routine of usual duties, and thrown into new and probably cheerful society. He takes more exercise than when at home, is more in the open air, etc.

CRYSTAL IN LOOK, DELIGHTFUL IN TASTE, AND TONIC IN EFFECT, CHATTOLANEE WATER.

Result of analysis of three samples of Baltimore City water, taken at different times. Average analysis.

One gallon of water contains, matter in solution.....2.4 grains.

Matter in suspension.....2.1 grains.

—
In solution and suspension.....4.5 grains.

The matter in solution and suspension consists out of

Inorganic matter.....4.3 grains.

Organic matter.....0.2 grains.

The matter in suspension consists of Silicate of Iron and Alumina. The matter in solution, Oxide of Iron and Alumina, and a trace of Chloride of Sodium. It must be remarked, however, that the composition of the water, taken at different times, varies considerably. Sometimes it contains so much matter in suspension that it looks turbid.

The water by standing always forms a sediment, and quite a heavy one by boiling, in which behaviour it differs very decidedly from the water of the Chattolanee Spring, which never forms a sediment. Sometimes the city water also contains more organic matter of a volatile nature, which gives to it the peculiar "fishy" taste and smell very well known to the citizens of Baltimore. In conclusion we would state that the water of the Chattolanee Spring is of an entirely different nature compared with the city water.

LEHMANN & MAGER.

A Peculiar property of Chattolanee Water.

Unlike a purely Mineral Water, Chattolanee Water is wonderfully beneficial to those in perfect health as well as to invalids. Most Mineral Waters are

beneficial only to those who are sufferers from some form of chronic disease, and are not intended for robust and healthy people; but a characteristic quality of Chattolanee Water is—that well and healthy people can drink unlimited quantities of it without any discomfort whatever. It seems to have scarcely any aperient influence other than the mildest, but does exert a wonderfully beneficial effect by its tonic and alterative action on the system. Old people who have used the water daily for forty years or more praise it because it never causes them any inconvenience, but renders a positive benefit in the prevention of disease, by the maintenance of the functional activity of the great organs of the body.

IMPURE WATER KILLS MORE THAN WAR.

A complete "turn around." A few years ago Physicians and Hygienists were unanimous in advising abstinence from water at meals, and for an hour or so thereafter, when a "little" might be taken. Now they tell their patients to *drink all the water they want, and when they want, provided it be pure.* Why this change of opinion? Because these very Physicians and Hygienists found that those of their patients who went to the Springs of purest water and drank the most water at their pleasure, came back with perfect digestion and rosy complexions, two unflinching evidences of sound health. Pure water is a wonderful tonic to the digestive system.

Think of This. One of England's greatest physicians has put it on record that from two to three people out of every ten are afflicted with some type of Kidney disorder; and medical statistics the world over bear him out. Why is this? Because an insufficiency of pure water is consumed, causing impurities of the body in the shape of irritating salts to inflame the Kidneys, or because impure water has been used, loading an already burdened system with additional impurities.

What Chattolane Water Does. Being alkaline in composition, and the constituents in perfect proportion by the "Chemistry of Nature," Chattolane Water is rapidly appropriated by the blood, the unhealthy constituents or principles of which are completely changed or neutralized by its mild yet radical action. It washes out or flushes, as it were, the Kidneys and their related organs, ridding the system of Urates, Uric Acid and other dangerous substances.

CHATTOLANEE WATER CURES KIDNEY AND LIVER DISEASES.

Of Course. Bright's Disease is the great Kidney Trouble, and the seriously dangerous one, because of its insidious approach. *Scarcely one in ten who are sufferers with this form of Kidney trouble suspect it until the disease has become established.* The presence of Albumen is the physical evidence of dangerous kidney disease; just as cough is sure proof of bronchial irritation or indigestion the pioneer of dyspepsia. Anyone suspecting the presence of this disease should provide for an analysis, and against its encroachment. Use the best attainable preventive. Chattolanee Water, by its action on the blood and kidneys, purifying and cleansing the system of all worn-out matter, is the ideal daily beverage, preventing the approach of this dangerous malady.

A Startling Fact! Did it ever occur to you that the reason so many visitors to water resorts are scarcely benefited at all is because of the miserable drainage and sewerage? They drink into the system daily enough of the poisonous principles of contaminated water to render a cure impossible, and a benefit of but very transitory nature. This accounts for the return of so many families from the country, from the seashore and the various springs, none the better, but really the worse, for their efforts at recreation and recuperation. *The sewerage, drainage and wastage of Chattolanee Springs Hotel are carried off by the most perfect system of scientific and practical plumbing.*

In the presence of such provision as this for the health of guests and residents, there is no further use to argue for the impression of the fact that the Water of Chattolanee Springs is the purest in the country, and will be kept at that standard.

A Thought with a Peg in it. The chemistry of nature, while not understood so well as the chemistry of art, being superior to the latter in its processes, prepares wonderful remedies for the relief of disease; and the solutions of the various mineral salts, as given forth by springs and fountains, are far more beneficial than if prepared by pharmaceutical manipulation. Able physicians say they are of tenfold more benefit than like prescriptions would prove.

FEVERS AND MALARIA COME FROM IMPURE WATER.

Chattolane Water, as prepared in the recesses of nature's laboratory, is a water of rare worth for daily use, and a remedy of matchless service in its effects on the kidneys, the urinary organs, and the blood, the sources of about three-fourths of all diseases.

Beware of Substitutes. Drink only the Chattolane Water as produced by the Spring, and not a salty solution as made from the components by dissolving the respective mineral salts in water. Its the fashion now with certain manufacturing chemists to list the salts of various springs and order definite quantities thereof to be dissolved in certain proportions of water. The result is generally an unpalatable and useless beverage, defeating the very purposes it promises to accomplish, and disappointing the hopeful and expectant patient.

Chattolane Spring Water never disappoints the user. Drink it from the Spring or as bottled or barreled by us.

All the medical profession and scientists the world over are united on the opinion that very many of the maladies which afflict people have their origin in the use of impure water. Chattolane Spring Water assays as absolutely pure drinking water, and its use is the surest means of preventing disease.

What Does it Cure? A perfectly reasonable question is embodied in the short sentence—What does it cure? As mentioned in the previous pages, its remedial efficacy is of the highest order in Dyspepsia, Indigestion, and other disorders of the stomach and viscera; in Rheumatism and Rheumatic Gout; in the treatment of Inflammation, Irritation, Diabetes, Hæmaturia and other affections of the Kidney and Bladder, including Catarrhal Affections of the Bladder. Its special service is exhibited in its effects on uric acid deposits in the form of stone, gravel and sandy or gritty deposits. Its range of application extends to the treatment of Bright's Disease as palliative certainly and preventive, if taken in time and used freely, and to the prevention of uræmic poisoning and convulsions, so frequently attending gestation, and to many of the diseases peculiar to women.

PLENTY OF PURE WATER MEANS SMALL BILLS FROM DOCTORS.

With All This at Your Door Why go five hundred miles to other Springs so celebrated, when you have fully their equal or superior almost at your own door? Can you give a good reason for not using the better water, and not patronizing the nearer and more enjoyable hotel, so near Philadelphia, Washington, etc.

THE advantages of living near a large city like Baltimore are innumerable; at the Chattolanee Springs you are thirty-five minutes from all the amusements, concerts, lectures, etc. You are but two or three hours from some of the most charming resorts on the Chesapeake Bay, the most beautiful bay in the world; the great Peabody and Pratt Libraries; Art Galleries and Educational Institutions; everything to make a stay charming is found in its convenience so near to the Springs as to be of it. And yet, so grand and beautiful is the scenery, free as it is from all suburban villages, so charming the vista from porches and tower and all the rooms, so picturesque the surroundings of the Hotel, so thick the groves, numerous the Springs and magnificent the drives, and withal so perfectly countrylike in the whole sweep of vision, that one can imagine himself too miles from the city, and yet be only thirty-five minutes ride away. A short description of the Valley itself may interest lovers of the beautiful in nature.

The Green Spring Valley is a beautiful tract of country running nearly east and west, and opening out at the basin of lovely Lake Roland. It is about seven miles long and two in width at its greatest breadth. The name, as stated, comes from the numerous springs which bubble up in small lakes, or ponds near the head of the valley. The ridge rises by gradual slopes, and rolls in broad waves toward the bed of the valley. On the south side there rises a chain of magnificent hills. The entire valley is adorned with fine farms and beautiful country residences. The soil is clay and loam, soft and micaceous, sprinkled with veins of limestone and iron ore throughout the rolling uplands. Here abound magnificent forest trees of oak, hickory, chestnut and maple, the "kalmia," or calico-bush, ferns and lichens in rich profusion. It is a garden spot for cereals and fruits of all kinds. Cascades and rivulets, filled with speckled trout, flow along through the blackish-gray rocks and ravines, the waters of which are clear and sparkling. Several affluents of the Gunpowder flow through the valley, making it of the richest and most fertile character.

CHATTOLANEE WATER IS AS PURE AS THE DEW.

How to live long.

BREATHE DEEP—OF PURE AIR.
DRINK DEEP—OF PURE WATER.
SLEEP DEEP—OF SOUND SLUMBER.

In these few pages, interspersed with health hints and suggestions concerning the value and importance of drinking plenty of pure water, the remarkable purity of Chattolanee Spring Water has been emphasized, and its remedial efficacy suggested. In summarizing its virtues, we can scarcely do better than to point to its absolute freedom from organic matter in solution or suspension; its velvety smoothness to the touch; its delightful influence on the system, no matter how great the quantity consumed; its refreshing and tonic effect, and its wonderful preventive power over disease. The water used in the hotel for drinking, bathing and cooking, will come from these celebrated springs. Coffee and tea, of so much importance to have pure, will be made from this spring water; because there is no need of filtering, boiling or purifying it, as nature has provided a perfect water, which flows from the rocks and the sands of profoundest depths in streams of crystal clearness.

 PURE water and pure air, the two prime essentials to good health, are found in their perfection and abundance at the Chattolanee Springs; and, such is the restfulness and harmony of surroundings at this beautiful spot that sound sleep

“Tired Nature’s Sweet Restorer”

falls as noiselessly on the eyelids as the snowflake on a bird’s wing. The supreme advantages, in conjunction with the numerous facilities which we have named in this pamphlet, present a strong argument in favor of the selection of Chattolanee Springs as a Summer Home.

It will amply repay you, and it will be a pleasant day’s excursion from either Philadelphia or Washington, to visit Chattolanee Springs, and convince yourself that the description of the Springs, the Hotel and the surroundings, as herein set forth, are exactly as represented, and not mere word pictures.

All correspondence promptly answered, and special information cheerfully given, by

Yours very respectfully, &c.

PURE WATER MAKES PURE BLOOD.

—IMPORTANT.—

In these days of exaggerated statement and unqualified representations, it is natural that the readers of this pamphlet should desire to know something concerning the accuracy of all that has been presented to them in its pages.

The proprietor of Chattolantee Springs Hotel who is widely and favorably known to most Baltimoreans as a large and successful constructor of highest grade residences and public edifices, notably the Altamont Hotel, on Eutaw Place, recognized as the model Hotel of Baltimore, may not be so well known to the people of WASHINGTON and PHILADELPHIA. He would, accordingly, present the following names of well-known citizens, who can furnish all the information needed, respecting any statements he makes, and his general reputation:

BALTIMORE.

Hon. R. C. Davidson,	Mayor of the City.	Mr. Wm. T. Dixon,	Pres. Nat'l Exchange Bank.
Mr. C. Morton Stewart,	Importer.	Mr. Chas. J. Baker,	Pres. Franklin Nat'l Bank.
Gen'l Felix Agnus,	"Baltimore American."	Mr. J. B. Ramsay,	Pres. Nat'l Mechanics Bank.
A. S. Abell & Co.	"The Sun."	Mr. B. F. Newcomer,	Pres. Balto. Safe Deposit Co.
Mr. Henry James,	President Citizens Nat'l Bank.	Mr. John Gill,	Pres. Mercantile Trust Co.
Mr. Eugene Levering,	Pres. Bank of Commerce.		

WASHINGTON, D. C.

Mr. Brainard H. Warner, Pres. Columbia Nat'l B'k. | Rev. J. G. Butler, D. D., Chaplain House of Rep.

PHILADELPHIA, PA.

Mr. Frank P. Thompson, Vice-Pres. Penn. R. R. Co.	Riehle Bros.,	Scale Manufacturers.
The J. B. Lippincott Co., Publishers.	Col. L. U. Maltby,	Proprietor Hotel Lafayette.
Hon. John Wanamaker.	Mr. H. S. Jones, Sec'y to Hon. John Wanamaker.

ADAMANT WALL PLASTER.

ADAMANT is a Cement or Artificial Stone, capable of resisting all ordinary casualties so disastrous to common Plaster.

ADAMANT adheres firmly to lath, brick, stone or iron, lasting as long as the building without even cracking.

ADAMANT is lighter than lime plaster, it does not shrink and is impermeable to noxious gases or disease germs.

ADAMANT is valuable for setting tiles and slabs, because of its remarkable adhesive properties.

ADAMANT is cooler in summer and warmer in winter
ADAMANT EXCLUDES ALL DAMPNESS. IS FIRE PROOF. *Never injures colors.*

ADAMANT *saves time and expense, as carpenters can follow plasterers in twelve hours and need not move out while the plastering is going on. Painters prefer its smooth surface.*

ADAMANT is supplanting common plaster in the hospitals of large cities.
